April 2015 / Vol.76

First service after 28,000 hours!

Operator of Kunice Municipal WwTP in Czech Republic.

The unit recently underwent its first overhaul! This was 5 years after installation. The unit has in that time dewatered its way through 27,800 hours of activated sludge. Impressive when you consider it is an ES-131-SACE. It was installed in 2010 and has worked on average 15 hours per day.

Parts replaced were the moving rings in both the thickening and dewatering zone and the screw. The screw and thickening zone did not need replacing however the operator said "I am looking forward to another 5 years of hassle free dewatering and would prefer to replace all the moving rings and the screw".

ES-352 Commissioning

Recently AMCON Europe s.r.o. carried out the commissioning of an ES-352 at Rainbow farms in Rustenburg, South Africa. The unit is installed at a chicken processing plant treating sludge from GEM DAF (Gas Energy Mixing) system.

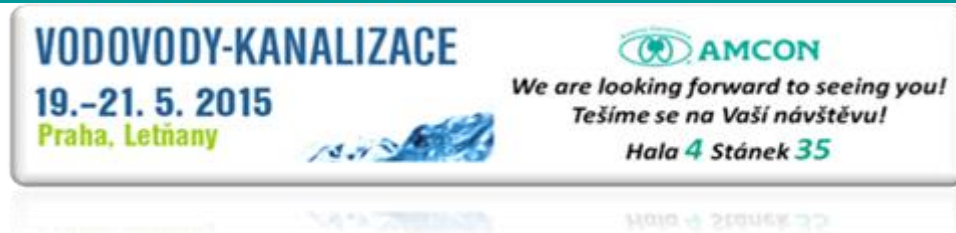

The results are impressive with a top DS content of 30.41% and achieved throughput of 494kgDS/h. Sludge was being fed at 5.8% concentration. Polymer dosage was calculated at 2.4h/kg-DS with a solids capture rate of 98.8%.

Sean Wright commissioning engineer had this to say. "This was an interesting project to commission. The results speak for themselves, achieving such a high throughput in conjunction with 30%+ DSC and a very satisfactory solid capture rate prove that Volute is the technology that really can deliver all of our clients' needs. To spend 2 days onsite and deliver results like this really do make it a pleasure to work with Volute."
